

- forming a first and second orientation films on the first and second substrates,
respectively;
forming a seal material at edges of the first substrate;
assembling the first and second substrates with each other;
performing a first pressurizing and heating process on the first and second substrates to
form a first cell gap;
injecting a liquid crystal material into the first cell gap;
performing second pressurizing and heating process on the first and second substrates to
form a second cell gap, wherein the second cell gap is narrower than the first cell gap; and
sealing the second cell gap.
7. A method of fabricating a liquid crystal display panel having first and second substrates,
the method comprising the steps of:
assembling the first substrate with the second substrate;
performing a first pressurizing and heating process on the assembled substrates to have a
first cell gap;
injecting a liquid crystal material into the first cell gap;
performing second pressurizing and heating process on the substrates to have a second
cell gap, wherein the second cell gap is narrower than the first cell gap;
sealing the second cell gap; and
cutting the sealed panel into a unit cell.
